Total TRAIN TOILET MANAGEMENT

Providing a complete train toilet management system...to the UK Rail Industry

The Possible Problems...

- Scaling up of probes in the pan and holding tank send erroneous messages to the computer causing a lockdown.
- There is always a build-up of scale and organic matter on the internal surfaces of the holding tank no matter what chemical is used.
- Solid matter such as disposable nappies, sanitary towels, underwear and disinfectant wipes, causing mechanical blockages and can affect sensor probes as in 1 above.
- Inadequate cleaning of toilet cubical leaving organic residue which gives rise to malodour.
- Natural property of excrement to have a malodour.

Product Offering...

Identify the problems within the waste retention tank

Take a full photographic record of blockages and design problems within the tank

Obtain samples of the waste within the holding tank

Analyse these samples to ascertain correct treatment required to reduce or eliminate bacterial activity

Prepare full report on results of steps 1 through 4.

Prepare proposal on implementation of programme to resolve all issues
