

BIO-CHELA FREE SACHETS

SIMPLE, EFFECTIVE, EASY-TO-USE BIO-TECHNOLOGY IN A SACHET TO KEEP DRAINS FREE RUNNING, ODOUR AND GREASE FREE

- ✓ Use in drains and gullies in catering establishments, abattoirs, animal rearing areas, cesspits, septic tanks and organic grease traps.
- ✓ Environmentally responsible and safer to use than caustic or acidic based drain products.

DIRECTIONS FOR USE

The plastic sachets are water soluble so do not handle with wet hands or splash with water.

Position one sachet at the highest point in each drain or gully run. Flush with warm water to dissolve sachet and disperse contents. Use enough water to flush away. Do this when the drains are likely to be little or unused to allow the bio culture in Bio Sachet Free to become active and colonise the drains and grease trap. Do not use sanitizers, acidic or caustic drain cleaners or bleach. Cleaners with a pH of between 7 and 9 are suitable.

Bio Sachet Free digests and mobilises most organic matter such as grease, fat, carbohydrate, protein, blood. The residual products are non-toxic to aquatic life and are safe to discharge into public drainage systems.

NUMBER OF MEALS PER DAY	MAINTENANCE DOSAGE RATE	HIGH GREASE
UP TO 250	1 SACHETS PER WEEK	2 SACHETS PER WEEK
250-500	2 SACHETS PER WEEK	4 SACHETS PER WEEK
MORE THAN 500	3 SACHETS PER WEEK	6 SACHETS PER WEEK

Store in a cool, dry place. Do not allow sachets to come into contact with water before use.
